# APPENDIX A CEQA INITIAL STUDY CHECKLIST

## REGULATORY GUIDANCE

This appendix provides the Environmental Checklist form as required by CEQA. Chapters 3 and 4 of the EA/IS provide the explanations of responses made to the questions on the checklist. Chapter 2 describes measures that have been incorporated into the proposed project as necessary to reduce impacts to less-than-significant levels.

The following terminology is used to evaluate the level of significance of the Environmental Checklist impact topics:

- A finding of *no impact* is made when the analysis concludes that the proposed project would not affect the environmental issue, relative to the basis of comparison.
- An impact is considered *less than significant* if the analysis concludes that there would be no substantial adverse change in the environment, relative to the basis of comparison, and that no mitigation is needed.
- An impact is considered *less than significant with mitigation* if the analysis concludes that there would be no substantial adverse change in the environment, relative to the basis of comparison, with the incorporation of the mitigation measures into the proposed project (identified in Chapter 3 and Chapter 4 of the EA/IS).
- An impact is considered *potentially significant* if the analysis concludes that there could be a substantial adverse effect on the environment.

Mitigation refers to measures or procedures adopted by the project proponent to avoid, reduce, or compensate for the proposed project's potentially adverse effects on the environment. As described in Chapters 3 and 4, the proposed 2007 Pilot Program includes compliance with mitigation measures adopted by agencies under the Environmental Water Account (EWA) Short-term Program decision documents. These documents include the Bureau of Reclamation's NEPA Record of Decision (March 2004), the California Department of Water Resources CEQA Notice of Determination (March 2004), the Department of Water Resources CEQA Findings (March 2004), and Mitigation, Monitoring and Reporting Program (Chapter 6 of EWA Final EIS/EIR, January 2004).

An initial study is conducted by a lead agency to determine if a project may have a significant effect on the environment. In accordance with the CEQA Guidelines Section 15063, an EIR must be prepared if an initial study indicates that the proposed project under review may have a potentially significant impact on the environment. A Negative Declaration may be prepared instead, if the lead agency prepares a written statement describing the reasons why the proposed project would not have a significant effect on the environment, and therefore, why it does not require the preparation of an EIR (CEQA Guidelines Section 15371). According to CEQA Guidelines Section 15070, a Negative Declaration shall be prepared for a project subject to CEQA when either:

a) The initial study shows there is no substantial evidence, in light of the whole record before the agency, that the proposed project may have a significant effect on the environment, or

- b) The initial study identifies potentially significant effects, but:
  - (1) Revisions in the project plans or proposals made by or agreed to by the applicant before the proposed negative declaration is released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur and;
  - (2) There is no substantial evidence, in light of the whole record before the agency, that the proposed project as revised may have a significant effect on the environment.

If revisions are adopted in the proposed project in accordance with the CEQA Guidelines Section 15070(b), a mitigated negative declaration is prepared.

### ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

	Aesthetics Biological Resources Hazards & Hazardous Materials Mineral Resources Public Resources Utilities / Service Systems		Air Quality Geology / Soils Land Use / Planning Population / Housing Transportation / Traffic None After Mitigation
ш	Othlico / Oct vioc Cystems	Significance	7 None Alter Mitigation

# **EVALUATION OF ENVIRONMENTAL IMPACTS**

- 1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- All answers must take account of the whole action involved, including off-site as well as onsite, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

- 4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact". The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from, "Earlier Analyses", may be cross-referenced).
- 5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA Process, an effect has been adequately analyzed in an earlier EIR or negative declaration Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
  - a. Earlier Analysis Used. Identify and state where they are available for review.
  - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c. Mitigation Measures. For effects that are "Less then Significant with Mitigation Measures Incorporated", describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9. The explanation of each issue should identify:
  - a. The significance criteria or threshold, if any, used to evaluate each question; and
  - b. The mitigation measure identified, if any, to reduce the impact to less than significance.

		Less Than Significant

would occur or be accelerated? Includer recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?  Transportation/Traffic (Discussed in Section 3.13). Would the project:  Cause a substantial increase in traffic, in relation to existing traffic and the capacity of the street system (i.e., a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?  Exceed, individually or cumulatively, the level of service standards established by the county congestion management agency for designated roads or highways?  Cause a change in air traffic patterns, including either an increase in traffic levels or a change in location, that results in substantial safety risks?  Contain a design feature (e.g., sharp curves or a dangerous intersection) or incompatible uses (e.g., farm equipment) that would substantially increase hazards?  Result in inadequate emergency access?  Result in inadequate parking capacity?  Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?  Willittes and Service Systems (Discussed in Section 3.2). Would the project:  Exceed wastewater treatment restrictions or standards of the applicable Regional water Quality  Control Board?  Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?  Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?  Require or result in the construction of new storm water drainage facilities or expansion of existing facilities or expansion of existing facilities or or expansion of existing facilities or or expansion of existing facilities or or or expanded entitlements needed?	regional parks or other recreational facilities, such				
Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?  Transportation/Traffic (Discussed in Section 3.13). Would the project:  Cause a substantial increase in traffic, in relation to existing traffic and the capacity of the street system (i.e., a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?  Exceed, individually or cumulatively, the level of service standards established by the county congestion management agency for designated roads or highways?  Cause a change in air traffic patterns, including cither an increase in traffic levels or a change in location, that results in substantial safety risks?  Contain a design feature (e.g., sharp curves or a dangerous intersection) or incompatible uses (e.g., farm equipment) that would substantially increase hazards?  Result in inadequate emergency access?  Result in inadequate parking capacity?  Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?  Willities and Service Systems (Discussed in Section 3.2). Would the project:  Exceed wastewater treatment restrictions or standards of the applicable Regional water Quality Control Board?  Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?  Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects? Comply with federal, state, and local statutes and regulations as they relate to solid waste?				☒
Mandatory Findings of Significance (Discussed in Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of any fish or wildlife species, cause any fish or wildlife to drop below self-sustaining levels, threaten or eliminate a plant or animal community, reduce the number or restrict the range of any rare, protected, special, or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	Section 4.0).	Would the project: ⊠		
Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)			⊠	
Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			⊠	

### DISCUSSION:

- 1. Based on the discussions of air quality, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, noise, recreation, and traffic and transportation, in sections of Chapter 3 of the EA/IS, the proposed project would have a less-than-significant impact with impact avoidance and mitigation measures incorporated.
- 2. Chapter 4 of the EA/IS evaluates potential cumulative impacts of the proposed project. The proposed project would not result in cumulatively considerable effects.
- 3. The proposed project would not have a substantial environmental effect on human beings, either directly or indirectly (see Chapters 3 and 4 of the EA/IS).
