TOTAL ACRES

Wyoming has 15 NAWCA projects either completed or underway. These projects have conserved 51,072 acres of wildlife habitat. NAWCA funding of more than \$3.8 million has stimulated partner contributions of over \$6.4 million. These figures do not include multi-state projects.

WETLANDS OF WYOMING

This project includes fourteen tracts aimed at improving the quantity, quality, and availability of preferred habitats for the ducks, geese, swans, and other waterbirds that rely on Wyoming wetlands. Many wetlands in Wyoming are threatened by anthropogenic demands for water. Municipal, industrial, agricultural, and recreational uses are stressors to wildlife and habitat that depend on this lifeblood to survive. The opportunities to bridge these gaps between anthropogenic demands and wildlife lies at the heart of the Intermountain West Joint Venture's Water 4 Initiative. Conservation actions in this project will counter act these stressors and improve conditions for wetlands and the wildlife that depend on them. Fee title acquisition, restoration, and enhancement of wetlands will be used by the partnership to maximize wetland value in this arid landscape. One of the keys to our success is capturing water where it's available and improving the ability to get water to existing reservoirs and wetlands by making sure that aging water diversion structures are maintained. With increased demand for water and competing land uses ensuring wetlands remain on the landscape for wildlife is essential.
